**M54548L**

## BI-DIRECTIONAL MOTOR DRIVER WITH MOTOR SPEED CONTROL

**DESCRIPTION**

The M54548L, BI-DIRECTIONAL MOTOR DRIVER, consists of a full bridge power driver designed for use in a D-C motor control circuit. The internal operational amplifier is capable for controlling the voltage across the bridge outputs.

**FEATURES**

- Wide operating voltage range
- NMOS and CMOS compatible input
- 1.2A output current
- Integral operational amplifier for output source voltage
- Integral diodes for transient suppression
- Braking mode input

**APPLICATION**

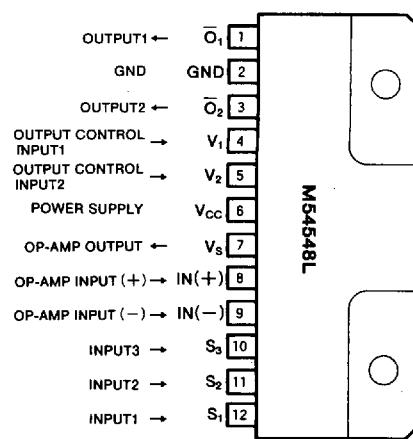

Audio, video cassette recorder

**FUNCTION**

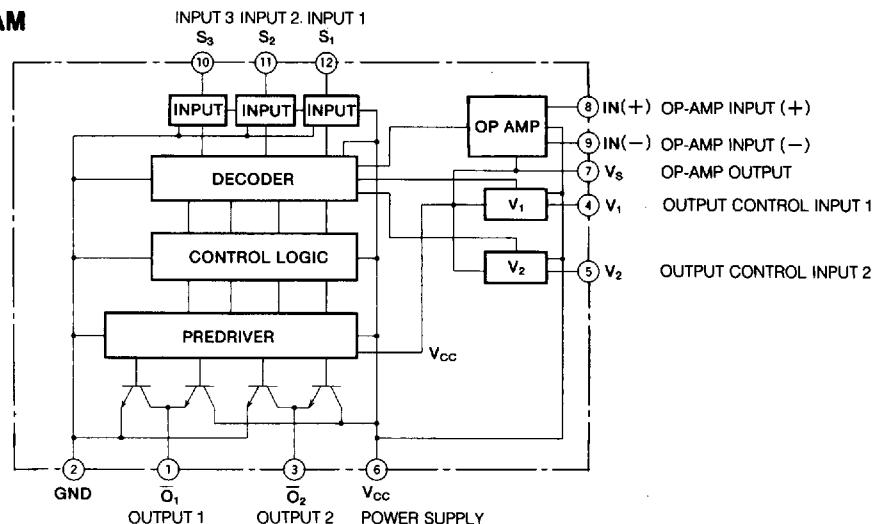

The M54548L, full bridge motor driver, has the logic circuitry and the quasi-darlington power driver for bidirectional control of D-C motors operating at current up to 1.2A. The inputs, S<sub>1</sub>, S<sub>2</sub> and S<sub>3</sub>, are capable to control the bridge output polarity and also to select the supply voltage of the predriver from the voltages driven by V<sub>1</sub>, V<sub>2</sub> or the output of the operational amplifier.
