

# Quadruple 2-input multiplexer

## HEF4019B MSI

### DESCRIPTION

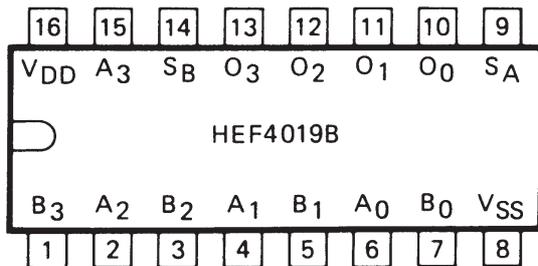

The HEF4019B provides four multiplexing circuits with common select inputs ( $S_A$ ,  $S_B$ ); each circuit contains two inputs ( $A_n$ ,  $B_n$ ) and one output ( $O_n$ ). It may be used to select four bits of information from one of two sources.

The A inputs are selected when  $S_A$  is HIGH, the B inputs when  $S_B$  is HIGH. When  $S_A$  and  $S_B$  are HIGH, output ( $O_n$ ) is the logical OR of the  $A_n$  and  $B_n$  inputs ( $O_n = A_n + B_n$ ). When  $S_A$  and  $S_B$  are LOW, output ( $O_n$ ) is LOW independent of the multiplexer inputs.
